Hey reader, I am Iulian or Julian if it's more easy for you. I am born in Romania but for more than half a year I am a resident in the UK, with the right to stay, currently for 5 years. Before coming to the UK, I worked in my country, gaining extensive experience mainly in dealing with clients, especially working in the insurance industry. I started from a beginner position and I evolved, step by step, to midle management and even top management positions. Now, I decided to reinvent myself. The IT field, and especially the software programming, have always attracted me, I can say that it was and still is like a hobby for me. Currently I am based in Gloucester, Gloucestershire, UK but I am ready for relocation.

I decided to take my passion to a professional level, which is why I moved to the UK and started studying the online course provided by Code Institute Ireland at the end of which I will graduate with a Level 5 Diploma, Full Stack Software Development. During this course I studied HTML5, CSS3, Bootstrap 4, JavaScript, jQuery, JSON, API's, and I will study until May 2020, Python, Django, Flask, MongoDB, MySQL. How has the journey been so far? Amazing. I learned a lot of interesting and exciting things and I can't wait to see how the back-end side is.

Where do I want to go? I want to become the expert as I was in insurance industry but this time in coding. And that's because the attention to details, the desire to always be in control of myself and my professional abilities and skills, made me adept at always doing things well.

Willing to relocate: Anywhere

## Work Experience
